### New Black Walnut Found Splits Like English Type

New York.—A native American black walnut, whose nuts split like those of the so-called English walnut, allowing the meat to come out in two even halves, is the promising find of Prof. J. Russell Smith of the Columbia university school of business, who reports that he has several grafted specimens growing on his farm near Round Hill, Va. The hard, woody partitions in the shell that make so much work for the nut-pick in ordinary black walnuts are lacking in the new variety, which probably arose as a chance mutant or "sport" in the natural timber.

It is pointed out that native walnut trees of this kind offer considerable promise for the development of an American nut-growing industry. "English" walnuts, which in point of fact came to this country from Spain and southern France, are too tender to grow profitably north of California, Florida and other Southern states, whereas the native black walnut thrives in the woods clear up to the Canadian border and beyond.

The Northern Nut Growers' association, of which Professor Smith is a member, is offering a prize of $50 for the discovery of the best black walnut trees in America.
